## Article Description

On 17 May 2026, a Romanian dissemination activity was organised within the Erasmus+ KA210-SCH project DiCoRE - Digital Competence for Resilient Educators. The activity was hosted by DAKTECH INOVATIVE SOFT SRL in Braila, Romania, and aimed to present the main results of the project, promote the Erasmus+ Programme and share practical examples of digital education methods with a wider local audience.

The event brought together educators, trainers, education stakeholders and representatives interested in digital transformation in school education. During the activity, participants were introduced to the objectives of the DiCoRE project and to the international cooperation developed by the partners from Poland, Turkiye, Belgium and Romania. The Romanian dissemination meeting created a useful space for exchanging ideas about how teachers can become more confident, resilient and creative in using digital tools in everyday teaching practice.

A central part of the event was dedicated to the presentation of the project results and the training modules developed during the partnership. Participants explored the main themes of the DiCoRE project, including the use of AR and VR in education, gamification in the classroom, artificial intelligence for personalised education and digital tools that support emotional, reflective and inclusive learning. Special attention was given to Module 4 - Connect & Reflect: Building Emotional Skills with Digital Tools, which was coordinated by the Romanian partner.

Through this module, the Romanian dissemination activity highlighted the importance of combining digital competence with emotional awareness, communication, empathy and wellbeing. The participants discussed how digital tools can help teachers create safer, more inclusive and more engaging learning environments, while also supporting students in developing social and emotional skills. Practical examples were presented to show how reflection activities, collaborative tools and interactive digital resources can be integrated into lessons.

The event also strengthened the visibility and impact of the DiCoRE project at local level. The participants received information about the project resources, the training modules and the opportunities offered by Erasmus+ cooperation. The discussions encouraged educators to adapt the project results to their own institutional contexts and to continue promoting digital readiness, resilience and innovation in school education.

By organising this dissemination activity in Romania, DAKTECH INOVATIVE SOFT SRL contributed to the sustainability of the DiCoRE project and supported the wider use of its results beyond the partnership. The activity confirmed the relevance of digital transformation in education and underlined the need for continuous professional development for teachers in a rapidly changing digital society.

## Short Agenda

| Time          | Activity                                                                          |
|---------------|-----------------------------------------------------------------------------------|
| 09:30 - 10:00 | Registration of participants and welcome coffee                                   |
| 10:00 - 10:20 | Official opening of the Romanian dissemination activity                           |
